

Here there is a home icon button when I click on a card it appears after I go to the next page
Through this I am able to perform back to previous page but the problem is when I scroll this disappear I want this button to remain fixed irrespective if I scroll also I want it to be there I want this to be here just below header in same position so that to go to previous page I need not scroll to the top again then go back

The reason it disappears is because your Home button is currently using:

JavaScript

`absolute` positions it relative to the parent `<Box>` , so when the content scrolls, the button scrolls away with the page.

Solution 1 (Recommended) - Sticky below Header

Replace your `IconButton` `sx` with:

```
<IconButton
  onClick={() => setValue(null)}
  aria-label="back"
  size="small"
  sx={{
    position: "sticky",
    top: 10, // adjust according to header height
    left: 90,
    zIndex: 1200,

    mt: 1,
    color: "#1976D2",
    border: "2px solid",
    borderRadius: 15,
    bgcolor: "#fff",
    boxShadow: "0 4px 12px rgba(0,0,0,0.12)",

    "&:hover": {
      bgcolor: "#f5f5f5",
    },
  }}
/>
```

```
<Home />
</IconButton>
```

Solution 2 - Fixed Position (Always Visible)

If you want it visible even while scrolling to the very bottom:

```
<IconButton
  onClick={() => setValue(null)}
  aria-label="back"
  size="small"
  sx={{
    position: "fixed",
    top: 80, // below your header
    left: 100,
    zIndex: 1500,

    color: "#1976D2",
    bgcolor: "#fff",
    border: "2px solid",
    borderRadius: 15,
    boxShadow: "0 6px 16px rgba(0,0,0,0.15)",

    "&:hover": {
      bgcolor: "#f5f5f5",
    },
  }}
>
  <Home />
</IconButton>
```

Which one should you use?

Since you said:

"I want this button to remain fixed irrespective if I scroll"

"I want it just below the header in the same position"

Use **Solution 2** (`position: fixed`). It will stay permanently below the header and never disappear while scrolling. MarketingPage

You can even make it look more professional by changing it to:

```
<IconButton
  onClick={() => setValue(null)}
  sx={{
    position: "fixed",
    top: 80,
    left: 100,
    zIndex: 1500,
    bgcolor: "#1976D2",
```

```

    color: "#fff",
    width: 48,
    height: 48,
    boxShadow: "0 8px 20px rgba(25,118,210,0.3)",

    "&:hover": {
      bgcolor: "#1565C0",
      transform: "scale(1.05)",
    },
  }}
>
<Home />
</IconButton>

```

This gives a floating action button feel while keeping it permanently accessible.

 Sources

"I want this button to remain fixed irrespective if I scroll" I want to fix it in whatever position it is now at present

If you want the button to stay **exactly where it is currently appearing** (top: 0 , left: 90) and never move when the page scrolls, then simply change:

JavaScript

to:

JavaScript

and keep the rest as-is:

```

<IconButton
  onClick={() => setValue(null)}
  aria-label="back"
  size="small"
  sx={{
    mt: 1,
    cursor: "pointer",
    textAlign: "left",
    fontWeight: 600,
    color: "#1976D2",
    px: 1,
    borderRadius: 15,
  }}

```

```

border: "2px solid",
maxWidth: 60,

position: "fixed",    // ← changed
top: 0,
left: 90,
zIndex: 2000,         // ← add this
}}
>
<Home />
</IconButton>

```

However, because you have:

```

mt: 1,

JavaScript

```

the actual visual position is being influenced by both. To make it stay **pixel-perfect in the exact place where you currently see it**, I recommend:

```

position: "fixed",
top: 16,      // same as mt:1 ≈ 8px-16px depending on theme
left: 90,
- . . . ----
JavaScript

```

and remove:

```

JavaScript

```

So the final version becomes:

```

<IconButton
  onClick={() => setValue(null)}
  aria-label="back"
  size="small"

  JavaScript

  top: 16,
  left: 90,
  zIndex: 2000,

  cursor: "pointer",
  textAlign: "left",
  fontWeight: 600,
  color: "#1976D2",
  px: 1,
  borderRadius: 15,

```

```
border: "2px solid",  
maxWidth: 60,  
}}  
>  
<Home />  
</IconButton>
```

This will keep the Home button permanently visible in the same location regardless of how much the user scrolls.
