

```
// Ensure you are inside an async function to use 'await'
async function fetchMyData() {
  // 1. Define your array of promises (Note: fixed the typo 'axiox' and URL formatting)
  const Endpoints = [
    axios.get('http://191.168.0.20:3000/api'),
    axios.get('http://192.168.0.20')
  ];

  try {
    // 2. Tell JavaScript to WAIT for all promises in the array to finish
    const responses = await Promise.all(Endpoints);

    // 3. Extract the actual data from the Axios response objects
    const data1 = responses[0].data;
    const data2 = responses[1].data;

    console.log("Data from API 1:", data1);
    console.log("Data from API 2:", data2);

  } catch (error) {
    // This will run if ANY of the endpoints fail (e.g., 404 or network error)
    console.error("One of the requests failed:", error);
  }
}

fetchMyData();
```
